

Technical Evaluation Criteria
for
Development of Molecular Imprinted Polymers for the Detection of Pyrethroids

- 1) Demonstrated capabilities in surface imprinting technology
- 2) Demonstrated capabilities in the development of molecularly imprinted polymers for small molecules
- 3) Existing standard operating procedures which can be adapted for the pyrethroid MIPs
- 4) Demonstrated capability of performing electrochemical transduction methods

* Please note that these non-cost factors are approximately equal in importance to cost or price
